

Outreach & Applicant Insights Dashboard Report

1. Introduction

The dashboard was developed to provide a comprehensive view of outreach campaign performance, applicant distribution, and engagement effectiveness. It integrates data from Outreach, Applicants, and Campaigns to track key performance indicators (KPIs), identify trends, and highlight opportunities for improvement.

2. Dashboard Overview

The dashboard is divided into five key sections:

KPI Overview (Top Cards)

- Total Outreach Calls → Shows the scale of outreach effort.
- Response Rate → % of calls that resulted in meaningful engagement.
- Conversion Rate → % of completed applications relative to outreach calls.
- Escalation % → % of calls flagged as requiring escalation.
- Total Applications Received → Volume of applicants tracked.

These high-level KPIs help stakeholders quickly assess performance.

Breakdown Analysis

- By University (Bar Chart)
Displays call volume and outcomes per university. Highlights which universities generate the most interest or challenges.
 - By Campaign Category (Bar/Column Chart)
Shows success rate per campaign, allowing comparison across campaigns. Identifies best-performing campaigns to replicate.
 - By Applicant Country (Map / Bar Chart)
Visualizes geographic applicant distribution. Reveals top applicant source countries and under-represented regions.
-

Trends Over Time

- Outreach Calls by Date (Line Chart)
Shows how outreach efforts fluctuate across months. Identifies peak workloads and engagement dips.
 - Applications Submitted by Date (Line Chart)
Tracks how outreach translates into applications over time. Useful for aligning campaigns with high application activity.
-

Contact Attempt Effectiveness

- Call Outcomes Distribution (Bar/Pie Chart)
Displays proportions of key call outcomes (Connected, Not Connected, Wrong Number, Completed Application, etc.). Helps assess call effectiveness.
 - Top 10 Callers by Performance (Bar Chart)
Highlights caller productivity and effectiveness in converting calls into applications or commitments.
-

3. Dashboard and Insights or Impact

Outreach Applicant Dashboard

Campaign Dashboard

The dashboard reveals that:

1. Outreach efforts are large in volume but limited in conversions (conversion <20%).
2. Campaign effectiveness varies widely — some campaigns generate higher success rates.
3. Applicant pool is concentrated in a few regions (India, Nigeria, Ghana).
4. Peak outreach months (March–May) align with spikes in applications.
5. Caller productivity is uneven, suggesting targeted coaching or incentives for underperforming staff.

Narrative & Recommendations

Annotations are placed below visuals to guide interpretation:

- High percentage of “Not Connected” calls → need to refine contact lists or timing.
- Campaigns like FA24IP and SP25NIQ show strong performance → future campaigns should follow similar design.
- Certain countries (India, Nigeria, Ghana) dominate applications → consider tailored outreach in growing regions.
- Escalation rate is low (<3%) → indicates strong first-line call handling, but monitoring is required for complex cases.

4. Conclusion

The dashboard provides a unified view of outreach effectiveness, applicant behavior, and campaign success. It empowers decision-makers to:

- Optimize campaign design.
- Focus resources on high-converting regions and universities.
- Improve caller training and contact strategies.
- Monitor KPIs continuously for better enrollment outcomes.
